# Angular vs react performance comparison

## angular vs react vs vue vs @angular/core

Enter an npm package...

angular react vue @angular/core

Downloads in past 2 Years

Technology	Angular JS	React JS
Author	Google	Facebook Community
Type	Fully-featured MVC framework	Open Source JS library
Scalability	Scalable	More Scalable than Angular
Language	JavaScript, HTML	JSX
Learning Curve	High	Low
Community Support	Credible backing	Not so credible
Rendering	Client	Server Side
App Architecture	MVC	None, combined with Flux
Data Binding	Bi-Directional	Uni-Directional
DOM	Regular DOM	Virtual DOM
Developer's Perspective	Easier to set up longer to deliver apps	Longer to set up easier app quickly

## Most Loved, Dreaded, and wanted Web Frameworks

Angular	React
Angular architecture is a bit complex; it follows the component-oriented architecture	ReactJS architecture is more simplified; it follows the View-View-View-Control (MVC) architecture
Angular is written in Microsoft's TypeScript language	ReactJS is written in JavaScript language
Angular is compatible with any platform	ReactJS is not compatible
The latest version of Angular is Angular 7.2.0	The ReactJS latest version is 16.7.0
Angular supports bidirectional (two-way) data binding	ReactJS supports unidirectional (one-way) data binding
This framework is used in mobile apps and single-page applications	The React framework is used in web applications, hybrid apps, and native applications
In Angular, abstraction is medium	In React, abstraction is strong
Adding a JavaScript library to the source code in Angular is not possible	Adding a JavaScript library to the source code in React is possible
In Angular, documentation is slower	In ReactJS, documentation is faster
A single test is required for testing a complete project in Angular	More than one test is required for testing a complete project in React

Performance comparison angular vs react vs vue.

At that time, it became one of the most popular web frameworks. Therefore, the performance of angular could be negatively affected by the bidirectional data link process. Both technologies are very powerful, a clear improvement from the early days of web programming that enhances, facilitates and accelerates development. Should I look first look at the project requirements to take a precise decision? When you think about the JavaScript Ecosystem, Angular and React will almost immediately appear in your mind, since they are considered two of the most popular Front-End development frameworks. Consequently, using react gives further freedom to organize the code as one wishes. This means that when changes occur at the entry of the user interface, the status of the model will also be changed and vice versa. About the project here at Imaginary Cloud We take our pauses for lunch in a fun way! A few days ago, we have a PlayStation 4 in our Lisbon office, and take advantage of our free time playing some games. When we are between angular or react, I believe that in its majority it is reduced to personal preference, since they solve the same problems but with different implementations. I wanted the website to be attractive, but since it was not a core project, I decided to use Angular. I also found that angular is much more detailed, since it has a more Caldereta code. Angular ensures that the data is always synchronized at all levels, with the bidirectional data link, which contrasts with the unidirectional data link of React. You might also like these! These frameworks facilitate the reuse of the code, between web applications and mobile applications, and can offer great performance. o ralugna arap aes ay .noreigrus euq satnugerp o sadud sal a sateupser rartnoce arap amelborp n'Agnin ©Atmemirepxe on ,ograbme niS .savitan senoicacilpa sal omoc oneub nat isac n'Acuceje ed opmei I had a RESTful API capable of communicating with the front-end through REST requests, sending responses in JSON. Get in touch! Want to read more about React and Angular? That's why both frameworks try to minimize the cost of these operations, optimizing the way the DOM re-renders the view after an update. This framework popularized a concept in web development known as component-based architecture, that has many advantages like: Modular and cohesive components, which make them heavily reusable and that contributes to accelerating the development time. Then, I began to wonder how I would render content according to the URL. Dependency Injection and filtering data Angular vs React: which one to learn? Angular is a web framework developed and maintained by Google that was released under the name of AngularJS back in 2010.
